Graduate of the University of Alabama with an Economics degree turned programmer. I have years of experience in the tech sector handling a plethora of different hardware and software. With a passion for programming and a hunger for knowledge I taught myself how to develop a functional business front-end website with Stripe payment API integration. Yearning for more I pursued a programming course in full-stack development through LaunchCode, with the hope of pursuing a new career as a Software Engineer.

LANGUAGES

- C#
- HTML5/CSS3
